WORK EXPERIENCE

System Engineer

Tata Consultancy Services

09/2020 - 12/22

Chennai

Currently working as an Software Developer for the client CITI Bank, North America.

Achievements/Tasks

- Responsible for the implementation of services using JAVA, HTML, CSS, SQL in Devtest Workstation. Deployed all the services in the Devtest server.
- Service virtualization is the concept of simulating the behavior, data, and performance of the dependent systems and then creating a virtual service of the dependent systems.
- Responsible for managing the request and response pairs. Request pairs have been hit from the frontend and it redirected to the server and get the response from that server and shown that in the frontend.
- Virtualizing the transactional services reduces the cost involved in using them during the testing phase eliminates environment sharing and hence drastically reduces cost.
- The virtual services thus created can be used instead of the live systems which behave very much like the live systems.
- In charge of onboarding the new junior developers through knowledge transfer sessions. Responsible for syncing the codes using github and stored all the projects in the bitbucket.
- Storing , Updating and Creating all the data in the database using the SQL queries.
- Given Knowledge transfer sessions to the client about the project usage.
- Got Best Team Award for this project.
- Got Best Developer category.
